

Rebuilding lives through meaningful, long-lasting recovery.

Our all-male treatment center is specifically designed to assist individuals and their loved ones who are struggling with addiction to drugs and alcohol. The program's trauma informed and highly-individualized care is facilitated by an experienced team of licensed therapists, psychologists and counselors.

The schedule is highly structured, and our residents spend time attending individual therapy, group therapy, 12-step meetings, psychoeducational groups, family therapy, and experiential therapy. All of our programming is overseen by an assigned personal case manager who tracks clients progress, and updates their care plan as required.
